

# FACT SHEET

The **Inflation Reduction Act (IRA)** and the **Bipartisan Infrastructure Investment and Jobs Act (IIJA)** have made historic investments in clean energy, infrastructure, and climate resilience, reducing carbon emissions and energy costs, but these programs now face potential cuts.

## HISTORY

IIJA - November 15, 2021

IRA - August 16, 2022

- Support Arizona's energy efficiency and clean energy upgrades
- Promote economic growth while lowering energy costs for seniors and working families
- Expand efforts to reduce climate pollution
- Address rising energy costs and extreme heat challenges

## POSITIVE OUTCOMES

- **18,700+** good-paying jobs created in Arizona
- **\$1,000** savings in household energy costs
- **Electric Vehicle Tax Credits**
  - up to **\$7,500** at time of sale
- **Solar for All**
  - minimum **20% savings** on electricity while expanding solar access to low-income families, renters, and Tribal Nations
- **Grid Resiliency & Energy Independence**
- **Home Energy Rebates**
  - provides up to **\$14,000** for qualifying households to enhance energy efficiency, improve indoor air quality, and reduce utility bills
- **Rural Energy Programs**
  - **\$15M & \$185M** for rural businesses to install wind and solar panels, saving money and reducing pollution
- **Climate Pollution Reduction Grants**

## THREAT

Under the Trump administration, cuts to the funding of these programs made possible by the IRA and IIJA threaten to end union jobs, putting Americans out of work, especially in rural communities and small businesses. Millions of households could face higher energy bills, losing rebates for energy-saving home improvements. These cuts would also delay grid modernization and increase pollution, worsening the climate impacts and damaging public health.
